

CS1555 Recitation 9

Objective: JDBC PostgreSQL Guide – Database Programming

Part 1: Link to the local PostgreSQL server using JDBC [IDE]

1. Download the java demo code at:
<http://db.cs.pitt.edu/courses/cs1555/20-1/recitations/09/09.zip>
2. Run the 09DB.sql. This will create a new schema for this recitation.
3. In the each .java:
 - a. Change both the database username and password (line 13) your credentials.
 - b. Change the database URL if necessary (line 10) to: jdbc:postgresql://localhost:5432/
4. Download the JDBC driver at:
<https://jdbc.postgresql.org/download/postgresql-42.2.5.jre7.jar> (Java 7)
<https://jdbc.postgresql.org/download/postgresql-42.2.5.jar> (Java 8)
5. Add the library to the project and run the examples

Example 1: Connect to database using JDBC

Compile and run *JavaDemo.java*. This example connects to the local database and retrieves the tuples. Try to get the **class** number for the **students** table.

Example 2: Programming with cursors and extract the data type using JDBC

Compile and run *JavaDemoCursor.java*. This example connects to the local database and retrieves the tuples using a cursor. What is TYPE_SCROLL_INSENSITIVE and CONCUR_READ_ONLY?

Example 3: Handling exceptions using JDBC

Compile and run *JavaDemoException.java*. This example connects to the local database but fails to find the table. Check what values we can get from SQLException.

Example 4: Avoiding SQL injection using JDBC

Compile and run *JavaDemoInjection.java*. Try to gain access using SQL injection (e.g., login). Change the **password** variable, which represents the input password.

Compile and run *JavaDemoWOInjection.java*. Try to do the same here. What do you observe?

Example 5: Transactions using JDBC

Compile and run *JavaDemoTransaction.java*. This example connects to the local database and inserts two students using two insertion statements as one transaction.

Part 2: Link to the local PostgreSQL server using JDBC [Command Line]

1. Download the java demo code JavaDemo.java at:
<http://db.cs.pitt.edu/courses/cs1555/20-1/recitations/09/09.zip>
2. In the JavaDemo.java:
 - c. Change both the database username and password (line 13) your credentials.
 - d. Change the database URL if necessary (line 10) to: jdbc:postgresql://localhost:5432/
3. Download the JDBC driver at:
<https://jdbc.postgresql.org/download/postgresql-42.2.5.jre7.jar> (Java 7)
<https://jdbc.postgresql.org/download/postgresql-42.2.5.jar> (Java 8)
4. Put all files into one folder
5. Compile the code using (for example):
`javac -cp postgresql-42.2.5.jre7.jar JavaDemo.java` (Java 7)
`javac -cp postgresql-42.2.5.jar JavaDemo.java` (Java 8)
For Windows:
`javac -cp "postgresql-42.2.5.jre7.jar;." JavaDemo.java`
`javac -cp "postgresql-42.2.5.jar;." JavaDemo.java`
6. Run the code using (for example):
`java -cp postgresql-42.2.5.jre7.jar;. JavaDemo` (Java 7)
`java -cp postgresql-42.2.5.jar;. JavaDemo` (Java 8)
For Windows:
`java -cp "postgresql-42.2.5.jre7.jar;." JavaDemo`
`java -cp "postgresql-42.2.5.jar;." JavaDemo`
